RUGGED DEPENDABILITY

HYDRA 135-C

Now you can have all the power and control of a Hydra 985 by converting your old H-135 Cable Reel Unit (1975-current) with our conversion kits. In our nearly 50 years of experience making powered cable units, one thing is certain, the main frames don't fail. That is where we start the conversion, by adding to the existing frame. Now you can have the newest specs at a substantially lower cost than a new unit.

Power Unit Conversion: This is the basic conversion. Includes a completely new Tier 4 Yanmar diesel powered hydrastatic power unit rated at 24,000 lbs. of line pull. All new controls at the front and rear. Also includes a new power unit cylinder with integrated holding valve to move the power unit back and forth. Ready for your shop to install or send your unit to Hogg & Davis for us to do the conversion for you.

Power Steering Conversion: Add this conversion to provide easy maneuvering of your unit. Includes rotary actuator activated idler wheel, complete controls and new drawbar cylinder with integrated holding valve. Now you can move your unit easily into those tight spots and easily attach to the tow vehicle.

Bearing Mandrel Rack Conversion: Add this conversion to improve smoothness of payout and pulling operations while eliminating wear and tear on components. All metal to metal contact is eliminated with the use of Nylatron® mandrel bearings. Includes racks, bearings, bearing blocks and new reel mandrel.

Product improvements may be introduced at any time, specifications are subject to change without notice.
